

The app which I want to make for the Module II is Healthician.  
In this I will try to add the ~~part~~ following features:-

1) One person can add a report of all his family members.

→ This screen after logging in.

- 2) An image of any report can be saved under each topic which the user wants to add.
- 3) An alarm that the user can set for each of his pills, etc.
- 4) The user can also add if the member has any problem like sugar, high BP, etc.

Reason behind making this app •  
(Problems)

- An easy touch to maintain everyone's

personal health.

How can it be solved ? :

The above features will make it

possible.

Proper Health With Technology :

- Proper injections (timings / intervals)
- Time to time pills, etc.
